Report title: **Advancements of IOT in real time**

Event name	Advancements of IOT in real time		
Introduction to Event	The Internet of Things, or IoT, is the name that the IT folks have given to the now billions of physical devices throughout the world that are connected to the internet. These devices not only collect data, but they share it as well. Through the proliferation of wireless networks as well as cheap processors, it's now possible to turn a multitude of physical objects into an IoT device. These things can range from a smart thermostat in your home that you control with your smartphone, to a sophisticated driverless car that's filled with hundreds of sensors collecting and transmitting data back to make sure it is operating efficiently.
