Aditya Engineering College

To
The Principal,
Aditya Engineering College
Surampalem

Sir,

Sub: Request for approval of conducting Value Added Course - reg.

To update the technical skills of the students to meet the industry requirements, CSE Department would like to conduct a value added course "Machine Learning and its Applications" for the B.Tech - V semester students from 03-07-2017 to 07-07-2017.

Hence, I request you to grant approval to conduct the above course as per the schedule mentioned.

Thanking you,

Yours sincerely,

Head of the Department

CIRCULAR

All the students of B.Tech CSE are hereby informed that the department is offering value added course on “ **Machine Learning and its applications** ” through classroom mode which is scheduled from 03-07-2017 to 07-07-2017. The interested students can give their names to the faculty coordinator **Mr. K Govindaraju** on or before 01-07-2017. Certificates will be provided to all the students after successful completion of the course.

COURSE CONTENT

The following topics will be covered

Topic	Hours
Strictly focus on machine learning	7
Use free, open-source programming languages, such as Python or R.	7
Contain programming assignments for practice and hands-on experience	7
Hands-On Machine Learning with Scikit-Learn and TensorFlow	7
Overview of Machine Learning topics such as supervised vs unsupervised learning	7
Total hours	35

COURSE OUTCOMES

At the end of the course student will be able to

- Understand overview of Machine Learning topics such as supervised vs unsupervised learning
- Experiment Hands-On Machine Learning with Scikit-Learn and TensorFlow
- Use free, open-source programming languages, such as Python or R.
- Solve programming assignments for practice and hands-on

Report title: **Machine Learning and its applications**

Event name	Machine Learning and its applications	
Introduction to Event	Machine learning describes systems that make predictions using a model trained on real-world data. For example, let's say we want to build a system that can identify if a cat is in a picture. We first assemble many pictures to train our machine learning model. During this training phase, we feed pictures into the model, along with information around whether they contain a cat. While training, the model learns patterns in the images that are the most closely associated with cats. This model can then use the patterns learned during training to predict whether the new images that it's fed contain a cat. In this particular example, we might use a neural network to learn these patterns, but machine learning can be much simpler than that. Even fitting a line to a set of observed data points, and using that line to make new predictions, counts as a machine learning model.
