Project:

Project Name: Trust Based Routing Protocol for Multi-Hop Wireless Networks.

Language used: Java.

Description: In a multi-hop wireless Network the mobile nodes acts as a router to forward packets, which are generated from the other nodes. There is no fixed infrastructure for routing purpose. The multi-hop wireless Network nodes need to spare their resources and time in order to accomplish this task. However malicious nodes do not co-operate but makes use of fairness and performance of the network. These type of nodes reduces the network performance. In this paper, we propose a Trust based routing protocol for multi-hop wireless Networks TBRP (Trust Based Routing Protocol) based on

Trust value. In this The Trust Value.(TV) plays a vital role in the route detection. The TV can be calculated based on the low mobility, broken links and large hardware resources. Based on the Trust value we will route message through highly trusted nodes to minimize the probability of dropping the message and thus improve the network performance.
