## GENERATION

| 1. A higher load factor means                                      | Ans: commercial customers                                       |
|--------------------------------------------------------------------|-----------------------------------------------------------------|
| Ans: less variation in load                                        | 23. The purpose of control rods in nuclear                      |
| 2. In order to have lower cost of electrical                       | reactor is                                                      |
| energy generation                                                  | Ans: absorbing neutrons                                         |
| Ans: load factor and diversity factor should be                    | 24. material used for control rods is                           |
|                                                                    | Ans:cadmium                                                     |
| 3. The thermal plant gives minimum cost per kw                     | 25. the purpose of reflector in reactor core is                 |
| when used as                                                       | Ans: to reflect neutrons                                        |
| Ans:base load                                                      | 26. commonly used coolant is                                    |
| 4. Load factor of base load plant is                               | Ans: sodium                                                     |
| Ans: Medium                                                        | 27. the moderator used in fast breeder reactor is               |
| 5. thermal power station is suitable                               | Ans:heavy water d2o                                             |
| Ans:base or peak load plant                                        | 28. for high power output which of the                          |
| 6. Nuclear power station in suitable for                           | following turbines is used                                      |
| Ans: base load plan                                                | Ans:Pelton                                                      |
| 7. hydro station is suitable for                                   | 29. for the medium output (about 330000hp)                      |
| Ans: base or peak load plant                                       | which of the following turbines is used                         |
| 8. A peak load station                                             | Ans: Kaplan                                                     |
| Ans: can have operating cost high                                  | 30. For low output (about 150000h.p) which of                   |
| 9. the area under the daily load curve gives                       | the following turbines is used<br>Ans:Franics                   |
| Ans: no of units generated in that day                             |                                                                 |
| 10. The value of load factor should always be<br>Ans:Less than one | 31. The temperature inside the water boiler is <b>Ans:</b> 560c |
| 11. The value of demand factor is always                           | 32. Half-life means                                             |
| Ans: greater than one                                              | Ans: life of radioactive material                               |
| 12. The value of diversity factor is always                        | 33. The process of combination of two light                     |
| Ans: greater than one                                              | nuclei to form heavier nuclei is known as                       |
| 13. if capacity factor is $=$ load factor then                     | Ans: Fission                                                    |
| Ans: utilization factor is                                         | 34. the process of disintegration of a nucleus in               |
| 14. if capacity factor is =load factor then the                    | to two or more component of parts is                            |
| plants                                                             | known as                                                        |
| Ans: reserve capacity is zero                                      | Ans: fission                                                    |
| 15. installed capacity of power plant is                           | 35. natural uranium contains                                    |
| Ans: less than M.D                                                 | Ans:0.7%U238                                                    |
| 16. in an interconnected system diversity factor                   | 36. which of the following is correct                           |
| of whole system                                                    | <b>Ans:</b> utilization factor = capacity factor*load           |
| Ans:Zero                                                           | factor                                                          |
| 17. The knowledge of diversity factor helps in                     | 37. If the rated plant capacity and maximum                     |
| determining                                                        | load of generating station are equal, then                      |
| Ans: plant capacity                                                | Ans: load factor is 1                                           |
| 18. Hydro plant installed capacity depends on                      | 38. The capital cost of plant depends on                        |
| the                                                                | Ans: total installed capacity                                   |
| Ans:Head                                                           | 39. in India flat demand rate tariff is used                    |
| 19. Pick out fertile material                                      | Ans: for industrial loads                                       |
| Ans:U233                                                           | 40. Resenditial loads are charged according to                  |
| 20. PICK OUT FISSILE MATERIAL                                      | Ans: block meter rate                                           |
| <b>Ans:</b> U238                                                   | 41. Reserve capacity in a system is generally                   |
| 21. in the cycle of steam power plant major loss                   | equal to                                                        |
| occurred in                                                        | Ans: capacity of two largest generating units                   |
| Ans:Furnace                                                        | 42. a mass curve can be plotted from                            |
| 22. Two part tariff is suitable for                                | Ans: chronological load curve                                   |

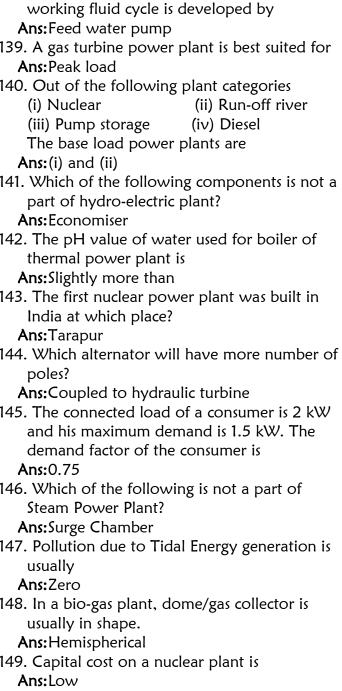

## GENERATION

| 43. a mass curve drawn for hydroelectric power     | Ans:cumulative runoff vs time                       |
|----------------------------------------------------|-----------------------------------------------------|
| stations essentially gives                         | 64. for a power station                             |
| Ans:storage requirement                            | <b>Ans:</b> 1 an 2                                  |
| 44. Pelton turbine is suitable for                 | 65. a base load                                     |
| Ans:high heads                                     | Ans:generally constant                              |
| 45. the efficiency of pumped storage plant is      | 66. less efficient units can be used as             |
| generally about                                    | <b>Ans:</b> peak units                              |
| Ans:65%                                            | 67. IN AN hydro electric power plant a conduit      |
| 46. A nuclear power plant should preferably be     | system for carrying water from the intake of        |
| located                                            | the turbine is                                      |
| Ans:away from coal field and reservoir dam         | Ans: penstock                                       |
| 47. The function of moderate or material in        | 68. location of surge tank, in an hydroelectric     |
| nuclear power plant is                             | power station is near                               |
| Ans: to slow down fast neutrons                    | Ans:turbine                                         |
| 48. a moderator material should have               | 69. The function of surge tank is to                |
| Ans: low atomic mass                               | Ans: relieve water hammer pressure                  |
| 49. a surge tank stabilizes                        | 70. water hammer is developed in                    |
| Ans: pressure difference in water                  | Ans: penstock                                       |
| 50. the useful life of thermal and hydro plants is | 71. a graphical representation of the discharge     |
| Ans: 25 and 125 years                              | and time is known as                                |
| 51. the machines used in hydro and thermal         | Ans: hydrograph                                     |
| plants run at                                      | 72. steam power plants works closely on             |
| Ans: 300 and 3000rpm                               | Ans:Carnot cycle                                    |
| 52. which of the following have quick response     | 73. steam turbine cycle ,the lowest pressure        |
| to load variations                                 | occur in                                            |
| Ans: thermal                                       | Ans: boiler                                         |
| 53. regarding condenser which statement is false   | 74. Arrange the following in the correct            |
| Ans: it increases the burden on water              | sequence in which the flue gas passes through       |
| treatment plant to a considerable extent           | them after coming out of the boiler in a            |
| 54. The purpose of thrash rack is                  | thermal power station                               |
| Ans: to avoid entry of debris                      | a. ID fan b. Air preheater                          |
| 55. A surge tank is provided near                  | c. economizer d. electrostatic precipitator         |
| Ans:turbine                                        | Ans:c,b,d,a                                         |
| 56. Thermal power station works on                 | 75. The function of the economizer ids to           |
| Ans:Rankine cycle                                  | Ans: heatup the incoming water by exhaust           |
| 57. which of the following coal is superior        | gases                                               |
| Ans: bituminous                                    | 76. In which part of the thermal power station      |
| 58. which type of coal is generally used in        | the pressure is less than that of the               |
| Indian steam stations                              | atmosphere                                          |
| Ans:bituminous                                     | Ans: condenser                                      |
| 59. The regulating reservoir storing water         | 77. The major function of the condenser is to       |
| temporarily when the load on the plant is          | Ans: reduced the back pressure so that              |
| reduced is                                         | minimumheat energy can be extracted                 |
| Ans:Forebay                                        | from the steam                                      |
| 60. The purpose of spill way is                    | 78. electrostatic precipitator is installed between |
| Ans: it discharge excess water                     | Ans:airpreheater and induced fan                    |
| 61. an ESP remove dust particles in                | 79. pulverized coal is                              |
| Ans: fly ash                                       | Ans: coal broken in to fine particles               |
| 62. If load factor is poor                         | 80. the coal of the lowest calorific value is       |
| Ans:all of the above                               | Ans:lignite                                         |
|                                                    | 0                                                   |
| 63. a mass curve is a graph of                     | 81. Coal having highest calorific value is          |

| Ans:Anthracite                                                    | 101. The draught which a chimney produces is            |
|-------------------------------------------------------------------|---------------------------------------------------------|
| 82. which of the following is considered to be                    | called                                                  |
| superior quality of coal                                          | Ans:Natural draught                                     |
| Ans: bituminous                                                   | 102. The draught in locomotive boilers                  |
| 83. The average ash content in the Indian coals                   | isproduced by                                           |
| is around                                                         | Ans:Steam jet                                           |
| Ans:20%                                                           | 103. Caking coals are those which                       |
| 84. the first nuclear power plant installed in                    | Ans:Form lumps or masses of coke                        |
| India is                                                          | 104. Blowing down of boiler water is the                |
| Ans:trapur(Maharashtra)                                           | process                                                 |
| 85. one atomic mass unit (AMU) is                                 | Ans: To control the solid concentration in the          |
| approximately equal ro                                            | boiler water by removing some of the                    |
| Ans:1.66*10-27kg                                                  | concentrated saline water                               |
| 86. Heavy water is                                                | 105. The blades of the gas turbine rotor are            |
| Ans:d2o                                                           | made of                                                 |
| 87. the function of the reflector in a nuclear                    | Ans:High nickel alloy (Mimic 80)                        |
| reactor is                                                        | 106. Fission chain reaction is possible when            |
| Ans:bounce back most of the neutrons that                         | Ans: Fission produces more neutrons than are            |
| escape from the fuel core                                         | ab-sorbed                                               |
| 88. reflectors of a nuclear reactor are made of                   | 107. A consumer has to pay lesser fixed charges         |
| Ans:beryllium                                                     | in                                                      |
| 89. graphite is use in a nuclear power plant is                   | Ans:Maximum demand tariff                               |
| Ans: moderator                                                    | 108. In Hopkinson demand rate or two part               |
| 90. which of the following materials cannot be                    | tariff the demand rate or fixed charges are             |
| used as a moderator                                               | Ans:Dependent upon the maximum demand                   |
| Ans: deuterium                                                    | of the consumer                                         |
| 91. the permissible value of frequency in power                   | 109. In a load-duration curve for an integrated         |
| system is                                                         | power system the uppermost crest                        |
| Ans:1%                                                            | represents the energy contributed by                    |
| 92. load curve of the power generation station                    | Ans: Peaking hydro or gas turbine stations              |
| is always                                                         | 110. The voltage of a single solar cell is<br>Ans:0.5 V |
| Ans: any combination of 1,2,3<br>93. load curve helps in deciding | 111. Load curve is useful in deciding the               |
| Ans:all of the above                                              | Ans: All of the above                                   |
| 94. the load duration curve for unity load factor                 | 112. Annual operating expenditure of a power            |
| will be                                                           | plant consists of                                       |
| Ans:rectangular shape                                             | Ans: Fixed charges, Running charges                     |
| 95. the mass curve represents                                     | 113. Direct conversion of heat into electric            |
| Ans: the total energy consumed by the load up                     | power is possible through                               |
| to a particular time in a day                                     | Ans:Thermionic converter                                |
| 96. the load factors for the domestic loads may                   | 114. A pilot exciter is provided on generators for      |
| be taken as                                                       | which of the following reasons?                         |
| Ans:20-15%                                                        | Ans: To excite the poles of main exciter                |
| 97. low power factor has the disadvantages of                     | 115. To increase power transfer capability of a         |
| Ans:all of the above                                              | long transmission line, we should                       |
| 98. power factor can be improved by using                         | Ans: Increase transmission voltage                      |
| Ans:allof the above                                               | 116. The moderator is used in nuclear power             |
| 99. static capacitors are interms of                              | plant to                                                |
| Ans:kvar                                                          | Ans:Decrease the speed of neutron                       |
| 100. The secondary sources of energy are                          | 117. Lignite, bituminous and anthracite are             |
| Ans:Solar, wind and water                                         | different ranks of                                      |

#### GENERATION

| Ans:Coal                                          | 135. Which of the following connections of a     |
|---------------------------------------------------|--------------------------------------------------|
| 118. In a nuclear reactor, heavy water can be     | three phase transformer are best suited for      |
| ideally used as                                   | 3-phase, 4-wire service?                         |
| Ans: Moderator                                    | Ans: $\Delta - Y$                                |
| 119. Value of Power factor lies in between        | 136. Kaplan turbines are used whenever the       |
| Ans:0 and 1                                       | water head is                                    |
| 120. Which of the following is a device capable   | Ans:Low                                          |
| of supplying electrical energy?                   | 137. Economisers are used to heat                |
| Ans:Solar cell                                    | Ans:Feed water                                   |
| 121. Large turbo-generators are usually driven by | 138. In thermal power plants, the pressure of    |
| Ans:Steam turbine                                 | working fluid cycle is developed by              |
| 122. If maximum load of generating station and    | Ans:Feed water pump                              |
| the rated plant capacity are equal then           | 139. A gas turbine power plant is best suited fo |
| Ans:Load factor and capacity factor are equal     | Ans: Peak load                                   |
| 123. Which of the following expressions depicts   | 140. Out of the following plant categories       |
| the Utilization Factor?                           | (i) Nuclear (ii) Run-off river                   |
| Ans:Ratio of maximum generator demand to          | (iii) Pump storage (iv) Diesel                   |
| the generator capacity.                           | The base load power plants are                   |
| 124. The following generating station has the     | Ans: (i) and (ii)                                |
| minimum running cost                              | 141. Which of the following components is not    |
| Ans: Hydroelectric power station                  | part of hydro-electric plant?                    |
| 125. The normal phase sequence of a 3 phase       | Ans: Economiser                                  |
| AC supply is                                      | 142. The pH value of water used for boiler of    |
| Ans:RYB                                           | thermal power plant is                           |
| 126. The ratio of average load to the maximum     | Ans:Slightly more than                           |
| demand during a given period is                   | 143. The first nuclear power plant was built in  |
| Ans:Load factor                                   | India at which place?                            |
| 127. In a nuclear power station, moderator is     | Ans: Tarapur                                     |
| used to                                           | 144. Which alternator will have more number      |
| Ans:Reduce the speed of neutrons                  | poles?                                           |
| 128. Induced draft fans are located at            | Ans:Coupled to hydraulic turbine                 |
| Ans:The top                                       | 145. The connected load of a consumer is 2 k $V$ |
| 129. The disadvantages of renewable source of     | and his maximum demand is 1.5 kW. The            |
| energy is /are                                    | demand factor of the consumer is                 |
| Ans:Availability in low energy densities          | Ans:0.75                                         |
| 130. Which of the following is usually not the    | 146. Which of the following is not a part of     |
| generating voltage?                               | Steam Power Plant?                               |
| <b>Ans:1</b> 2.5 kV                               | Ans:Surge Chamber                                |
| 131. Large size steam power plants and nuclear    | 147. Pollution due to Tidal Energy generation    |
| plants are suitable for                           | usually                                          |
| Ans:Base loads                                    | Ans:Zero                                         |
| 132. Which plant can be never have 100% load      | 148. In a bio-gas plant, dome/gas collector is   |
| factor                                            | usually in shape.                                |
| Ans:Peak load plant                               | Ans:Hemispherical                                |
| 133. More heat loss in a steam power station      | 149. Capital cost on a nuclear plant is          |
| occurs in                                         | Ans:Low                                          |
| Ans:Condenser                                     | 150. Has the maximum life tenure.                |
| 134. A commercial and an ideal regulated power    | Ans:Steel Towers                                 |
| supply should have                                | 151. Power generation of a thermal power pla     |
| Ans:1%, 0% regulation                             | is based on                                      |
|                                                   | Ance Danking Cyclo                               |

generation of a thermal power plant d on Ans:Rankine Cycle

## GENERATION

| 152. In a steam power plant, heats the               | 168. Binary vapour cycles are used to                |
|------------------------------------------------------|------------------------------------------------------|
| feed water on its way to the boiler by               | Ans:Balance the efficiency of turbine                |
| deriving heat from the flue gases.                   | 169. The amount of energy available in the wind      |
| Ans:Economizer                                       | at any instant is proportional to of the wind        |
| 153. Working fluid in a gas turbine plant is         | speed.                                               |
| generally compressed in, compressor.                 | Ans: Square                                          |
| Ans:Rotary, multi                                    | 170. Pugga valley in Ladakh is suitable for which    |
| 154. High Head Power Plant has turbine as            | of the following power generation?                   |
| common prime mover.                                  | Ans:Geo thermal                                      |
| Ans: Pelton Wheel                                    | 171. NASA standard value for solar constant          |
| 155. Solar Energy cannot be used in which of the     | <b>Ans:</b> 1353 Watts/sq.m                          |
| following processes?                                 | 172. A man receives an electricity bill where his    |
| Ans:Nuclear reactions                                | monthly consumption was given as 123 units.          |
| 156. Installed capacity of Micro Hydel power         | This commercial units is basically                   |
| plants is about                                      | Ans:kWh                                              |
| Ans:100 kW                                           | 173. Which of these sources leave a larger carbon    |
| 157. Which type of Hydel Power Plants can be         | footprint?                                           |
| used as both base and peak load plants?              | Ans: Thermal                                         |
| Ans:Storage type plants                              | 174. Combined cycle power plants may need            |
| 158. In context to solar energy production, the      | Ans: All of these                                    |
| efficiency of flat plate collectors is usually       | 175. Which one of the following is used to           |
| Ans: 30-50%                                          | measure temperature inside a boiler furnace?         |
| 159. In practice, Earth is chosen as a place of zero | Ans:Optical pyrometer                                |
| electric potential because it                        | 176. Which of the following in a thermal power       |
| Ans: Is easily available reference                   | plant is not a fixed cost?                           |
| 160. The power output from a hydro-electric          | Ans: Fuel cost                                       |
| power plant depends on                               | 177. The highest rating transformer is likely to     |
| Ans:Head, discharge and efficiency of the            | found application in                                 |
| system                                               | Ans: Generation                                      |
| 161. Core is insulated by in a shielded              | 178. For domestic installation the load of house     |
| cable.                                               | is considered in which category                      |
| Ans:PVC/PE                                           | Ans: Resistive and inductive                         |
| 162. The term "penstock" is associated with which    | 179. The overall efficiency of a thermal power       |
| type of power plant?                                 | plant is equal to                                    |
| Ans: Hydel                                           | <b>Ans:</b> Boiler efficiency x Turbine efficiency x |
| 163. Why surge tanks are used in hydroelectric       | Generator efficiency                                 |
| power system?                                        | 180. In a thermal power plant, feed water            |
| Ans:For the protection of penstock                   | heaters, super heaters and air preheaters are        |
| 164is used for non-conventional                      | mainly used to                                       |
| system to generate electrical energy.                | Ans: Increase the efficiency of the plant            |
| Ans:Tidal energy                                     | 181. Through which source is maximum electricity     |
| 165. Choose the correct schematic arrangement        | generated in the world?                              |
| of nuclear power station.                            | Ans:Coal                                             |
| Ans:Nuclear reactor, heat exchanger, steam           | 182. Coal used in power plant is also known as       |
| turbine, alternator                                  | Ans:Steam coal                                       |
| 166. Which of the following part or auxiliary is     | 183. The cost of fuel transportation is minimum      |
| not used in diesel power station?                    | in                                                   |
| Ans: Steam generating system                         | Ans:Hydro-electric plant                             |
| 167. Which of the following radio-active             | 184. Solar cell is a                                 |
| byproducts releases from nuclear reaction?           | Ans:Photo voltaic cell                               |
| Ans:Cesium                                           |                                                      |

| Electrical & Electronics Engineering                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | GENERATION                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <ul> <li>185. Electrostatic Precipitators are used for following</li> <li>Ans:Particulant emission control</li> <li>186. For the proper combustion of fuel in a thermal power plant, a proper circulation of air is also needed. The same is provided with the help of</li> <li>Ans:Draft fan</li> <li>187. What is separated with the help of magnetic separators in a coal preparation plant?</li> <li>Ans:Iron particles</li> <li>188. The efficiency of thermal power plant increases by</li> <li>Ans:Use of high pressured steam</li> <li>189. Boiler is a component of thermal power plants in which</li> <li>Ans:Water is converted into high pressured vapours</li> <li>190. In power systems the governors are generally used as an essential part of all types of turbines to control the</li> <li>Ans:Frequency</li> <li>191. The hydro generators (HG) and steam turbines (ST) run at respectively</li> <li>Ans:Hydro plants</li> <li>192. Spillways are constructed for</li> <li>Ans:Total energy available</li> <li>194. In hydro power station which components is used to step up the generating voltage to a suitable transmission voltage?</li> <li>Ans:Kaplan turbine</li> <li>196. Which of the following is used as water storage?</li> <li>Ans:Reservoir</li> <li>197. The generator which gives dc supply to the rotor is called</li> <li>Ans:Exiter</li> <li>198. Sluice gates and automated isolating valves are components of Ans:Valve House</li> <li>199. Which of the following pair is NOT correctly matched?</li> <li>Ans:Impulse turbine-Propellar turbine</li> </ul> | 200. With reference to hydropower station, the<br>graphical representation of water discharge<br>and time is known as<br>Ans:Hydrograph |
