Report on the FDP

Title:	A Five Day FDP on "Advanced techniques for Foundation Design"
Date:	22-08-2022 to 26-08-2022
Venue:	Seminar hall, Department of Civil Engineering
Resource Person:	Dr.G.RadhaKrishnan, Prof. & Head of Department,Sri Vasavi Engineering College (A), Tadepalligudem.

Report:

The objective of the FDP is, The FDP will focus on the design of shallow foundation on sloping ground, layered soil and under inclined & eccentric loading conditions. Piles under uplift and lateral loading conditions will also be discussed. In the undergraduate core course on Foundation Engineering, these topics are either not covered or discussed in simplified form. In the proposed course, these advanced topics will be discussed in detail. Field Engineers can be benefited from this course as the design of foundations under critical conditions will be discussed here. There are two main types of foundations: shallow and deep. Shallow foundations are placed near the ground surface and transfer the loads to the soil by bearing or shear. Deep foundations are embedded deeper into the ground and transfer the loads to the soil by friction, end-bearing, or both. The choice of foundation type depends on several factors, such as the soil strength, the depth of the water table, the magnitude and direction of the loads, the settlement tolerance, and the cost.

Report on the FDP

Title:	A Five Day FDP on " Mix Designs for New innovative Concretes "
Date:	20th Feb 2023 to 25th Feb 2023
Venue:	Seminar hall, Department of Civil Engineering
Resource Person:	Mr.B.Dali Naidu, Technical Executor-APSSDC

Report:

Objective of this Workshop is The key material in a Martian construction boom will be sulphur, says the Northwestern team. The basic idea is to heat sulphur to about 2400C so that it becomes liquid, mix it with Martian soil, which acts as an aggregate, and then let it cool. The sulphur solidifies, binding the aggregate and creating concrete. Voila-Martian concrete. The tests were straightforward. Having mixed the aggregate with different percentages of molten sulphur and allowed the samples to cool into blocks, they measured the physical properties of the resulting materials, such as their compressive strength and failure mechanisms. They also chemically analyzed the mix and simulated its behavior. The results make for interesting reading. It turns out that using an aggregate of smaller particles reduces the formation of voids, which significantly increases the strength of the material While concrete has always been a primary material on job sites, its popularity poses a problem for those advocates seeking greener construction methods and building products to reduce the impact on the environment. The researchers are looking for customized concrete for extremely lightweight and flexible and features high heat and electrical conductivity properties.

Event Report

Name of the Program : Road Safety Awareness Program

Name of the Instructor : K.Ayyappa Sharma,Motor Vehicle sub-inspector,kakinada
T N V S RAMACHANDRAN, Administrative Officer.

Participants : Drivers and Cleaners.

Duration of the Program : 1 day (Morning 10am to 4pm on 11.06.2022)

SUMMARY OF THE EVENT:

The course was inaugurated on 11.06.2021 at 9:30.AM by our respectable Principal Dr.A Ramesh. As per the program plan, session was started and went smooth for rest of the day and training session was successfully completed.
